

DOWNFLOW MODULE

IDEAL AS BUFFER STORAGE, STERILE
AND CAGE PREPARATION AREA

KEEP THE CLEAN EQUIPMENT CLEAN UNTIL YOU NEED IT

The downflow module allows you to create a sterile zone tailor-made to your requirements.

You decide how large you want the sterile zone to be. We join the modules on-site.

A quick, easy and cost efficient solution! Can you afford not to?

DOWNFLOW MODULE

IDEAL AS BUFFER STORAGE, STERILE
AND CAGE PREPARATION AREA

Ideal as:

- Buffer storage for autoclaved equipment (cages, lids, tops, bottles, etc.)
- Sterile corridor from the autoclave to e.g. preparation area, cage change area, etc.
- Cage preparation area for dispensing of bedding, diet, enrichment and water

The downflow module is a fully re-circulating unit providing HEPA filtered laminar air flow.

It is designed to protect equipment and procedures from contamination from the environment.

The downflow module operates at positive pressure.
